

Keep Dust Down in Just One Step

When there's a lot of dust generated on a road, driveway, or parking lot, there can be costly accidents, time-consuming conflicts with residents/businesses in the area, and problems for vehicles. That's why Boxley developed Dustinator 21. It's an innovative aggregate with dust-controlling Calcium Chloride already in the mix so you can use it to reduce dust in just one step. Dustinator 21 is also environmentally safe for plants and wildlife and offers the following benefits:

- A **stronger bond**, thanks to the addition of calcium chloride to the aggregate base
- **One-step application** instead of laying down the aggregate then applying the calcium chloride as a liquid treatment
- **Environmentally safe ingredients** with low toxicity to plants and animals, resistance to migration in soil, and small quantities required
- **The base has a longer life** because of the reduced traffic dust
- **More stable road surfaces** with increased load bearing capacity, firmness, and resistance to potholing and other forms of deterioration

To learn more about pricing and availability of Dustinator 21, contact Ronnie Thompson at **(540) 777-7634** (OFFICE) or **(540) 354-5971** (CELL).

Dustinator 21

Applications

Dustinator 21 can be applied anywhere dust is a potential problem, including:

- Driveways
- Construction roads
- Parking lots
- State maintained roads
